Reply to Office Action of October 29, 2003

Docket No. P-195

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) An inter-processor communication apparatus of a mobile communication system comprising:
a data-FIFO for storing configured to store a receiving data;
a slave-logic for controlling configured to control a writing operation of the data-FIFO and counting count the length of the receiving data until an end-tag signal is inputted;
a length-FIFO for storing configured to store the data length counted by the slave-logic;
and
a CPU for configured to continuously reading read the data stored in the data-FIFO as much as the data read from the length-FIFO when an interrupt signal is inputted from the slave-logic.
2. (Original) The apparatus of claim 1, wherein the slave-logic counts the length of the receiving data until an end tag signal is inputted.
3. (Original) The apparatus of claim 2, wherein the read data length is one frame data length.

4. (Original) The apparatus of claim 1, wherein the slave-logic stores the counted data length in the length-FIFO when the end tag signal is inputted and outputs an interrupt signal to the CPU.

5. (Original) The apparatus of claim 1, wherein the CPU continuously reads the data stored in the data-FIFO by 1 byte unit as much as the data length stored in the length-FIFO.

6. (Original) An inter-processor communication method of a mobile communication system, comprising the steps of:

storing a receiving data in a first region; counting the length of the receiving data stored in the first region;

checking whether an end tag is received;

storing the counted data length in a second region when the end tag is received and outputting an interrupt signal to a CPU; and

continuously reading the data stored in the first region by the CPU as much as the data length stored in the second region.

7. (Original) The method of claim 6, wherein the first and the second regions are FIFO.

Serial No. 09/801,639
Amdt. dated January 23, 2004

Docket No. P-195

8. (Original) The method of claim 6, wherein the data length stored in the second region is one frame of data length.

9. (Original) The method of claim 6, wherein the CPU continuously reads the data by 1 byte unit.

10. (New) An inter-processor communication apparatus of a mobile communication system, comprising:

means for storing received data in a first region;

means for counting the length of the received data stored in the first region;

means for checking whether an end tag is received;

means for storing the counted data length in a second region when the end tag is received and outputting an interrupt signal to a CPU; and

means for reading the data stored in the first region by the CPU as much as the data length stored in the second region.
